"Cheating camel" is an anagram of "climate change"

Introduction

The Cheating Camel kitset cycle trailers are a low cost way of obtaining a light-weight and strong, load-carrying trailer to tow behind your bike. These vehicles will usually pay for themselves in a few months by reducing the trips required in a car. They are designed so you can use 2nd hand bike wheels if you wish to save some money. If you want large trailers I can help build whatever you want to carry.

Extra hitches

If you wish to connect the same trailer to a second bike you can order an extra hitch base with towball or get the towbar bracket too, for attaching to your own trailer.

Quick release ball joint hitch with tow bar bracket.

SUP Stand-up Paddleboard trolley 10.5' board

Kayak and SUP Standup Paddleboard Trolleys

A strong welded frame with padding to strap your kayak onto and towbar for a very smooth towing experience. Using bike wheels results in much less friction than standard commercial trolleys with plastic bushes in fat wheels which are ok for sand & salt water but inefficient and not durable for longer distance towing. Two different sizes available for narrow or wide kayaks. Adjustable length towbar option available. SUP trolley one size fits all.

Kayak trolley

Cargo Bikes

The 2 wheeled Bakfiets is great fun to ride and great for conversing with kids. The 3 wheel tadpole is good for serious loads and has 20mm-hub, downhill mtb wheels on the front for strength & internal gear hub with coaster brake on back. 1200 x 700 mm load space.
