

Make Your Own Bike Trailer Workshop 2020

On Saturday 31st October, around 15 people gathered at the Oxford Terrace Baptist Church to construct 10 wooden-framed bike trailers for \$50 each. Steven Muir supplied the aluminium towbars, quick release ball-joint hitch, wheel attachments, and a variety of 2nd hand wheels. A big thanks to Placemakers who supplied the 75x25mm wood, glue and screws, and Ground Effect who provided some funds to subsidise the cost of the aluminium. The church is endeavouring to encourage sustainable living where it can, so this was a great opportunity to assist by providing the venue for free. Everyone had an enjoyable time making their trailers taking between 1 and 4 hours to complete construction. They are all looking forward to using them for load carrying rather than taking their car.

Again a big thanks to Ground Effect and Placemakers for subsidising the parts & costs to make it more affordable and for Oxford Terrace for hosting.
